STRUCTURE & CONFIGURATION

Configuration & Component Relationships

Curved Woven Back

Woven back geometry supports the upper body and transfers reclined force into both side frames.

Woven Seat Panel

Ventilated woven seating carries body weight and locks securely into the surrounding chair frame.

Left Chair Frame

The left structural frame carries arm and seat loads while locating the backrest and base.

Right Chair Frame

Opposite-side framing closes the load path and maintains correct alignment between seat and back.

Round Glass Top

Protected supports hold the glass top level, creating a stable serving surface above the table base.

Configuration boundary

Component names identify stated or visible product groups only. The exact installed version and inclusion of accessories are confirmed in the applicable order.

STRUCTURE

Structure Decomposition

This current-product structure view supports assembly recognition and configuration review. It is intended for product identification and option verification.

Selection significance

Confirm that the depicted assemblies and connection relationships match the exact model and ordered configuration. Do not infer hidden components or service steps from the image.
