Training type and capacity quantities

Powered treadmills, unpowered treadmills, ellipticals, rowers, steppers and ski trainers have different mechanisms. User load, speed, resistance, incline and running/pedal dimensions are separate quantities; motor power does not describe an unpowered version.

Start with the complete specifications on page 3. Review the actual configuration and supported options, then compare the product with the intended application.

CARDIO EQUIPMENT

Structure & configuration

Component / configuration	Function / scope
Top Support Frame	Upper structural frame connects the main support columns and provides stability for the complete training equipment assembly.
Handle Grip Assembly	Ergonomic handles provide comfortable gripping positions and improve control during upper body training movements.
Left Support Column	Vertical support structure strengthens the frame and connects the upper handle system with the main body.
Right Support Column	Main support post provides structural reinforcement and ensures balanced installation of the upper training components.
Console Display	Digital monitor provides workout data and training feedback for convenient exercise monitoring and control.
Component groups	Main Upright Column; Left Side Handle.

CARDIO EQUIPMENT

Application & product selection

Standing pull intervals in a structured circuit; Vertical training with a defined floor station; Coordinated conditioning in an open space; Focused ski-inspired exercise sessions.

Selection input	Review together
Training task	Exact exercise form and the stated user capacity.
Mechanism and display	Actual drive/resistance, console and adjustment version.
Space and supply	Product envelope, training clearance and stated power/connection needs.

Ordered configuration
Retain the exact model, specification option and included accessory scope in the written order.
Application photographs illustrate context, not inclusion of adjacent items.
